```kotlin
fun main() {
    val orders = listOf(...)

    orders.forEach {
        val groundBeans = grindCoffeeBeans(it.beans)
        val espresso = pullEspressoShot(groundBeans)
        val steamedMilk = steamMilk(it.milk)
        val cappuccino = makeCappuccino(it, espresso, steamedMilk)
        log("serve: $cappuccino")
    }
}
```

```kotlin
fun main() {
    val orders = listOf(...)

    val time = measureTimeMillis {
        orders.forEach {
            val groundBeans = grindCoffeeBeans(it.beans)
            val espresso = pullEspressoShot(groundBeans)
            val steamedMilk = steamMilk(it.milk)
            val cappuccino = makeCappuccino(it, espresso, steamedMilk)
            log("serve: $cappuccino")
        }
    }
    log("time: $time ms")
}
```
